

SWITZERLAND

FiBL

Sectors

METHOD

- ✓ ROADMAP living lab meetings to co-develop strategies, measures / social or technical innovations to reduce AMU
- ✓ Increase awareness and veterinarians' knowledge of organic farming strategies to reduce AMU and improve animal health and welfare

GOAL

- ✓ Co-develop strategies to reduce antimicrobial use (AMU) in organic pork, veal and beef production

KEY RESULTS

- ✓ Improved knowledge and awareness of veterinarians concerning organic farming practices and regulations
- ✓ Established a need for improvement in the documentation of AMU in organic pork production
- ✓ Established a need for knowledge on calf health on organic dairy farms
- ✓ Identified a need for action to increase animal health on organic dairy farms and organic veal farms

EXPECTED IMPACTS

INDUSTRY

- ✓ Increased transparency about AMU in the organic pig sector
- ✓ Merge the perspectives of organic veal and dairy producers

FARMERS & TECHNICIANS

- ✓ Solution to reduce AMU and increase / maintain animal health and welfare
- ✓ Provide extension services from vets to farmers about calf health
- ✓ Exchange among the actors in different sectors (dairy / veal farmers)

ANIMAL HEALTH PROFESSIONALS & VETERINARIANS

- ✓ To be partners /coaches of farmers to reduce AMU
- ✓ Understanding of organic farming and complementary veterinary medicine
- ✓ A collaboration of veterinary health services with the organic sector

POLICYMAKERS, CONSUMERS, CITIZENS

- ✓ Instrument to trace individual AM treatments in pigs to meet organic regulation
- ✓ Focus on reduction and maintain reduction of AMU in the organic sector
